Michigan Department of Natural Resources

In addition, we have received assistance from Tip of the Mitt Watershed Council, Dr. Bryan Pijanowski (Land Transformation Model and other research), Three Lakes Association, the Northwest Michigan Onsite Wastewater Treatment Taskforce and others too numerous to mention whose help is very much appreciated.

The Record-Eagle would like to thank Michigan Technological University and the Western Upper Peninsula Center for Science, Mathematics, and Environmental Education for allowing our NIE Manager to participate in the Ecology of the Great Lakes Teachers Institute. Through this program we were able to connect with local resources and organizations to develop project C.L.E.A.N. Water. If you are a teacher interested in this or other teacher institutes offered throughout the year, contact the center at (906) 487-3341. If you would like to see a photojournal of the Record-Eagle's experiences during the Institute, visit www.record-eagle.com/nie and click on C.L.E.A.N Water. A day-by-day look at the week spent learning about the health of our waterways can be found under "NIE Up North."
